DOMAIN: There are two conserved domains in the glycosyltransferase region: the N-terminal domain (domain A, also called GTI motif), which is probably involved in manganese coordination and substrate binding and the C-terminal domain (domain B, also called Gal/GalNac-T motif), which is probably involved in catalytic reaction and UDP-Gal binding (By similarity).

DOMAIN: The ricin B-type lectin domain binds to GalNAc and contributes to the glycopeptide specificity (By similarity).

SIMILARITY: Belongs to the glycosyltransferase family 2. GalNAc-T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      rissur spiritury: In the CNS, it is predominantly expressed in several distinct hypothalamic, thalamic and amygdaloid nuclei. The most abundant level of expression is in the paraventricular, ventromedial and arcuate nuclei of the hypothalamus, the anterodorsal and parafascicular nuclei of the thalamus and the central, basomedial and medial nuclei of the amygdala. Also expressed in cerebral cortex, lateral septum, habenula and

Glycobiology 13:549-557(2003)

-1- FUNCTION: Catalyzes the initial reaction in O-linked oligosaccharide biosynthesis, the transfer of an N-acetyl-D-galactosamine residue to a serine or threonine residue on the protein receptor. Has a broad spectrum of substrates for peptides such as EA2, MucSAC, MucJA, M PubMed=12651884; DOI=10.1093/glycob/cwg062; Young W.W. Jr., Holcomb D.R., Ten Hagen K.G., Tabak L.A.; "Expression of UDP-GalNAc.polypeptide Nroc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002). Event=Alternative splicing; Named isoforms=2; IsoId=Q6PB93-1; Sequence=Displayed; secreted form also exists. ALTERNATIVE PRODUCTS: and mouse cDNA sequences." IISSUE SPECIFICITY

Lectin; Manganese; Polymorphism; Signal-anchor; Transferase;
reaction and UDP-Gal binding (By similarity).
--- DOMAIN: The ricin B-type lectin domain binds to GalNAc and contributes to the glycopeptide specificity (By similarity).
--- SIMILARITY: Belongs to the glycosyltransferase family 2. GalNAc-T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                portypeticus was acceptional acception of the form.

Cytoplasmic (Potential).

Signal-anchor for type II membrane protein (Potential).

Catalytic subdomain A.

Catalytic subdomain B.

Ricin B-type lectin.

Not glycosylated (Probable).

By similarity.

Sequence 6737, Application US/09128352
Patent No. 656298
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
TITLE REFERENCE: GTC99-0358
TURRENT APPLICATION NUMBER: US/09/328,352
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 6373
LENGTH: 1297
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 32986, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: MAKE J. Rubenfield et al.

APPLICANT: MAKE J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND ANINO ACID SEQUENCES RELATING TO PSEUDOMONAS:

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT ELLING DATE: 1999-02-18

GENERAL INFORMATION:
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/540,236

CURRENT PILING DATE: 2000-04-04

CURRENT PILING DATE: 2000-04-04

SEQ ID NOS: 3840

LENGTH: 288
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 9

US-09-328-352-5230

Sequence 5230, Application US/09328352

Sequence 5230, Application US/09328352

GENERAL INFORMATION:

APPLICANT: GATY L. Beton et al.

APPLICANT: GATY L. Beton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER;

TITLE OF INVENTION: BAUVANNII FOR DIAGNOSTICS AND THERAPEUTICS

FILLE REFRENCE: GTOS9-03P8: US/09/328,352

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein TP0260 - syphilis spirochete
Cispecies: Treponema pallidum subsp. pallidum (syphilis spirochete)
Cispecies: Treponema pallidum subsp. pallidum (syphilis spirochete)
Cispecies: 24-Jul-1998 #sequence_revision 24-Jul-1998 #text_change 09-Jul-2004
Ciscession: A71347
Schools: A. Norris, S.J.; Weinstock, G.M.; White, O.; Sutton, G.G.; Dodson, R.; Gwinr rson, J.; Khalak, H.; Richardson, D.; Howell, J.K.; Chidambaram, M.; Utterback, T.; McDor they, L.; Weidman, J.; Smith, H.O.; Venter, J.C.
Schools: 1. Weidman, J.; Smith, H.O.; Venter, J.C.
Schools: J. 375-188, 1998

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
